# Introduction

The purpose of this guide is to provide a foundational understanding of the options and capabilities available when configuring Hospitality Products and Restaurant Courses.

# Overview

All activities required to define and configure a new Hospitality Product including Product Preparation Types, Restaurant Course, and Option Sets is provided here.

This guide will cover the configuration for the following:

- Product Preparation Types
- Restaurant Course
- Option Sets
  - o Product Options
  - Product Preparation Options
  - Product Set Options
  - Hospitality Products
- Hospitality Product Set Products
- Product List
- Product Preparation Type Mappings
- Fee Products

# Prior Training / Experience

You should be familiar with the following:

- Estate Manager Configuration
- Data Broadcasting

# **Product Preparation Types**

Product Preparation Types are used to categorise restaurant products by defining the type of preparation required for the product when ordered and submitted to a kitchen.

The Product Preparation Type maintenance application can be accessed through: Configuration > Hospitality > Product Preparation Types

| Configur            | ation                            | Hospitality | 0        | Product Preparation<br>Types |  |

To create a new product preparation type, select **Create a new Product Preparation Type**.

Enter a unique **Product Preparation Type ID**, this can be alphanumeric and contain a maximum of 20 characters.

| Product Preparation Type Maintenance               |                  |  |  |
|--|------------------|--|--|
| Please enter following details for the new Product | Preparation Type |  |  |
| Product Preparation Type ID                        | BAR              |  |  |
| Back     Create                                    |                  |  |  |

### Select Create.

+ Create a new Product Preparation Type

\* The Product Preparation Type ID cannot be changed once it has been created. You will be presented with the following option to complete creating the Product Preparation Type:

? 11 >

| Product Preparation Type Maintenance              |     |  |  |  |
|---|-----|--|--|--|
| Save Save   |     |  |  |  |
| You are editing Product Preparation Type ID 'BAR' |     |  |  |  |
| General   |     |  |  |  |
| Name*   | Bar |  |  |  |
| * Denotes Mandatory                               |     |  |  |  |

Enter a Name - this is mandatory field and can contain up to 30 alphanumeric characters.

Press Save to complete.

Repeat this step to create the rest of Product Preparation Types:

- COFFEES
- DESSERTS
- MAINS
- STARTERS

# **Restaurant Course**

New Courses can be created for Restaurant Locations and Areas that have already been configured. Restaurant Courses are configured with a sequence number to define the order courses are served in.

The Restaurant Courses Maintenance application can be accessed through: **Operations > Restaurant > Restaurant Courses** 

| Operatio                   |                     | <b>C</b><br>Res | W <b>f</b><br>taurant | 0   | Restaurant Course | es        |        |

| Preparation Time Warning Threshold (minutes)        | 10   |  |

\*Table and Table Status Definitions are discussed in How-To Guide Configuring Restaurant Tables and Table Status Definitions.

| Configuration | Description  |
|---------------|--|
| Sequence      | Set the number in the sequence of courses the table will go  |
|               | through.   |
| Name          | Enter an alphanumeric value that can contain a maximum       |
|               | of 20 characters. This name will be displayed in screens and |
|               | other configuration options.                                 |

Set the appropriate values as follows:

| On order move to next     | Select the checkbox to indicate that the tables status         |  |
|---------------------------|--|--|
| status                    | should move to the next table status in its sequence when      |  |
|                           | an order is submitted.   |  |
| On order move to status   | Select from the dropdown list to define the table status to    |  |
|                           | change to. This works in conjunction with <b>On order move</b> |  |
|                           | to next status and the table status definition Allow           |  |
|                           | Sequence Number Override setting.                              |  |
| On away move to next      | Select the checkbox to indicate that the table status should   |  |
| status                    | move to the next table status in its sequence when an          |  |
|                           | away message is submitted on the POS application.              |  |
| On away move to status    | Select from the dropdown list to define the table status to    |  |
|                           | change to. This works in conjunction with <b>On away move</b>  |  |
|                           | to next status and the table status definition Allow           |  |
|                           | Sequence Number Override setting.                              |  |
| Force Order per cover     | Select checkbox to prompt on the POS Application that for      |  |
|                           | the given course, all covers (Diners) should have an order.    |  |
|                           | This can be fulfilled with course fillers (No Course Orders)   |  |
| Warn On Over Order        | Select the checkbox to warn the POS Application operator       |  |
|                           | if more items of this course have been ordered than the        |  |
|                           | available diners on the table.                                 |  |
| Expected Preparation Time | Estimate of the preparation time to prepare the course         |  |
| (minutes)                 | (use in Kitchen Display screens).                              |  |
| Preparation Time Warning  | Warning threshold that triggers a colour change of the         |  |
|                           |  |  |
| Threshold (minutes)       | preparation time in the Kitchen Display.                       |  |

Then select the Product Preparation Types tab.

# **Option Sets**

Option Sets are used to create user-configurable data entry fields. The purpose and function of the option set is defined by the Option Set Type. In a restaurant, Product Options,

Product Preparation Options and Product Set Options are examples of Option Set Types that can be used.

Single or multiple option sets can be added to a hospitality product. Once all desired Option Sets have been configured against the product, these will be displayed in the POS application as options to be selected when a product is being sold.

The Product Attribute / Option Set Maintenance application can be accessed through: Configurations > Merchandise > Attribute / Option Sets

| Configu  | ration                           | Merchandise             | C Attribute<br>Sets | / Option |

Then Save again.

Product Set Options are essentially Product List Options but are intended to only be selected by Hospitality Product Set Products (also known as Set Menus) – these are described later in the document.

Enter a unique **Option Set ID**. The ID can be alphanumeric and contain a maximum of 40 characters.

Select **Product Set Options**, from the **Type** dropdown list.

Select the appropriate **Region** from the drop-down list.

# Hospitality Products

Enactor supports multiple hospitality product types such as Hospitality Product, Hospitality Option Product, Hospitality Product Set Product. Hospitality products are configured through the Product Maintenance application on the estate manager.

The Product Maintenance application can be accessed through: Configurations > Merchandise > Products

| Configuration   | 0                | Merchandis                                   | •                | <b>C</b>   | oducts                              | ,           |  |        |

Please enter following details for the new Product Price

#### Set the appropriate values on the **Product Price Maintenance** as follows:

| Configuration | Description   |
|---------------|---|
| Product ID    | Product ID of the product that you wish to set the price for,<br>this will be already populated if accessed through the<br>prices tab in Product Maintenance. |
| Location      | Select the appropriate location from the dropdown list.<br>Do not select if a Price Group is already set.   |
| Price Group   | Select the appropriate price group from the dropdown list.<br>Do not select if a Location is already set.   |
| Currency      | Select the applicable currency from the dropdown list.  |
| Start Date    | Defines the date from when the product price is applied.<br>Defaults to the date of creation of the Product price entry.                                      |
| End Date      | Defines the end date of the product price application (if necessary). Defaults to indefinite.   |
| Price Type    | Select <b>Retail Unit</b> from the dropdown list.   |

\*Location and Price Group are mutually exclusive fields. You must choose either one of these options to proceed.

#### Select Create.

You will be presented with the following options to complete creating the new product price:

| Product Price Maintenance                 |                |   |  |  |  |  |  |  |
|---|----------------|---|--|--|--|--|--|--|
| Save Save                                 |                |   |  |  |  |  |  |  |
| You are editing Product Price for Product | ct '000000002' |   |  |  |  |  |  |  |
| , Price Group 'United Kingdom'            |                |   |  |  |  |  |  |  |
| , Currency 'Pounds Sterling'              |                |   |  |  |  |  |  |  |
| , Start Date '13/12/23 00:00'             |                |   |  |  |  |  |  |  |
| , and Price Type 'Retail Unit'            |                |   |  |  |  |  |  |  |
| General                                   |                |   |  |  |  |  |  |  |
| Price*                                    | 12.00          |   |  |  |  |  |  |  |
| Pricing Method                            | -              | • |  |  |  |  |  |  |
| Price Change                              |                | Q |  |  |  |  |  |  |

Enter a positive numeric value for the product price and select **Save**. You will be taken back to the product maintenance prices tab where the configured product price will be visible with the options to edit or delete.

#### Set the appropriate values as follows:

| Configuration            | Description   |
|--------------------------|---|
| Product Preparation Type | Select a Product Preparation Type from the drop-down. This<br>is used to associate the product with a preparation type (e.g.<br>whether the product should be served as a starter, main, or |
|                          | dessert etc.)   |
| Default Course           | Select a course from the drop-down list to associate this product with. This is used to set the table status when the relevant course is sent away.   |
| Is Side Dish?            | (Optional) Select the checkbox to indicate that the product is<br>served as a side dish. This is generally only relevant to<br>applications that analyse transaction.xml files.             |

\*Allergens can also be added here – these are described in the **How to configure Allergens** guide.

Press Save to complete.

# Hospitality Product Set Products

A Hospitality Product Set Product can be created if a restaurant wishes to offer a Set Menu. This allows regular hospitality products to be assigned to a set menu with a zero price on individual items that are served. The price of the set menu is defined against the Hospitality Product Set Product.

Set menus can be configured using Product Set Options, as context pricing is enabled for set menu functionality for instances when products with surcharges are included in set menus. The price of the individual products is ignored but the surcharge is defined as a context price against the item and it is added to the price of the set menu. It is also possible to define a single product to have different context prices against different set menu options.

This guide will provide the configuration needed to create a Set Menu with three courses.

Create three Product Set Options named STARTERS, MAINS, DESSERTS as described earlier in this document.

# Product List

A Product List is a collection of products referenced by an ID and a specific Region. Each product ID in the collection (list) is also associated with predefined Product Attributes. (Also referred to as option sets) Hospitality makes use of product list for option set configuration.

The Product List Maintenance application can be accessed through: Configurations > Merchandise > Product Lists

| Configu  | uration Go Merchan   | dise  | Product LI | sts                               |

Press **Save** to complete.

# Product Preparation Type Mappings

Product Preparation Type Mappings are used to associate Products with a preparation type (e.g. 'Chocolate brownies' to Desserts, 'Gin & Tonic' to 'Drinks' etc.).

This can be done when configuring new products in Products Maintenance (described in a separate how-to guide) or through the Product Preparation Type Mappings Maintenance application.

The Product Preparation Type Mapping Maintenance application can be accessed through: Configuration > Hospitality > Product Preparation Type Mappings

| Configuration                         | 0       | Hospitality | 0 | Product Preparation<br>Type Mappings |  |  |  |

Press **Save** to complete.

\*You can view, edit, copy, or delete Product Preparation Type Mapping associated with any product through the Product Preparation Type Mapping Maintenance application.

# Fee Products

This option is used to define products with an applicable service charge. This will usually be a Fee Product with a percentage configured as its product price. To create a new Fee Product, go to the Product Maintenance page and select **Create a new Product**.

Then press Save again.

\*If needed, refer to How-To Guide Product Price for further clarifications.

# Broadcasting

To deliver the configuration changes to the POS, broadcast the following entities.

- Product
- Product Attribute
- Product List
- Product Group
- Product Preparation Type
- Product Preparation Type Mapping
- Product Price
- Option Set
- Restaurant Course

# **POS Functionality**

Log in to a POS, press Tables and select a table.

The POS will then prompt to select the number of diners on the table. Once this is done, the table order screen will be displayed with two separate menus.
